DETAILED ACTION

Election Acknowledgment

1. Acknowledgment is made of the election of group I claims 1-23, without traverse, the non-elected claims 24-51 are withdrawn from the consideration. The non-elected claims should be canceled by the Application during the prosecution of this application.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 16-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 16, it is unclear as what is first –mentioned substrate, and third substrate. What happened to a second one?

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3, 6-15, 18-19 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 2 297 618 A, here after "618".

Regarding claims 1-2, 8-9, 18-19, and 23, "618" discloses a angular velocity sensor and manufacturing process with features of the claimed invention including a substrate, the support portions, flexural portion, oscillating structure, and displacement or acceleration sensor to detect the oscillation. The oscillator is electromagnetically driven.

Regarding claims 3, the angular velocity sensor consists of at least one vibrator.

Regarding claims 6, the angular velocity sensor consists of at plurality of vibrators.

Regarding claims 7, the angular velocity sensor consists of two vibrators.

Regarding claims 10-11, web 26 are considered to be the dug portions.

Regarding claims 12-15, "618" shows the use of magnet for the same purpose.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over "619".

Regarding these claims "619" does not show an annular vibrator shape and show a rectangular one. However, since no specific problem being solved with this shape and in the absence of sufficient recitation of the importance of such shape, it would have been obvious for a skilled artisan at the time of the invention to modify "619" to use any desirable shape such as an

Art Unit: 2855

annular one. Because once all aspect of the invention is presented in a prior art, the mere change of a shape fails to provide for an unobvious advantage to a patentable distinction over other shapes.

8. Claims 20-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
